## GENCARB-700 GAC

### Description

Rotocarb's GenCarb-700 series of Granular Activated Carbon (GAC) is manufactured from sustainably sourced macadamia nut shells through steam activation. The resulting high-density carbon structure with a developed bimodal meso- and micro- porous structure allows for the adsorption of a range of molecular sizes, making this carbon ideal for a broad range of water treatment applications. Due to this unique structure, this medium grade GAC bridges the gap between conventional coal and coconut carbons and may be used as an effective alternative to either. This product is ideally suited for general water treatment applications.

### Product Advantages

- Steam activated
- No regenerated content
- Medium-high developed internal surface area
- Effective bi-modal adsorbing pore structure
- Wide range of contaminant removal capabilities
- Low ash content
- High hardness and mechanical strength
- Rapid bed fluidization and low energy backwash
- SANS 52915 (EN12915) Compliant - Products used for treatment of water intended for human consumption

### Applications<sup>1</sup>

- General Potable / Drinking water treatment
- Municipal water treatment
- Waste water treatment
- Water re-use applications
- Ground water treatment
- Aquaculture systems
- Agricultural water treatment

### GenCarb-700 Specifications

<b>Iodine Number (mg/g)</b>	700+
<b>Ash Content (wt%)</b>	< 3
<b>Moisture Content (wt%)</b>	< 5
<b>Ball Pan Hardness (%)</b>	Min 97
<b>Apparent Density (kg/m<sup>3</sup>)</b>	360

### Sizing and Packaging

<b>Sizing (ASTM Mesh)<sup>2</sup></b>	6x12, 8x16, 8x30, 12x30, 12x40
<b>Standard Packaging</b>	20kg Bags or 335kg Bulk Bags
